# Introduction

This report provides an overview of the water quality in the Suir Catchment and the pressures impacting on water quality. This report is based on data up to 2021. The latest water quality data, dashboards and maps throughout this report are available on [catchments.ie](https://catchments.ie) and [EPA Water Map](https://epa.maps.ie).

The Suir Catchment includes the area drained by the River Suir and all streams entering tidal water between Drumdowney and Cheekpoint, Co. Waterford, draining a total area of 3,542km<sup>2</sup>. The largest urban centre in the catchment is Waterford City. The other main urban centres in this catchment are Carrick-on-Suir, Clonmel, Caher, Thurles, Tipperary, Fethard and Templemore.

The Suir Catchment is divided into 29 subcatchments and has 179 surface water bodies and 43 groundwater bodies.

[View the Suir Catchment on the EPA Water Map](#)

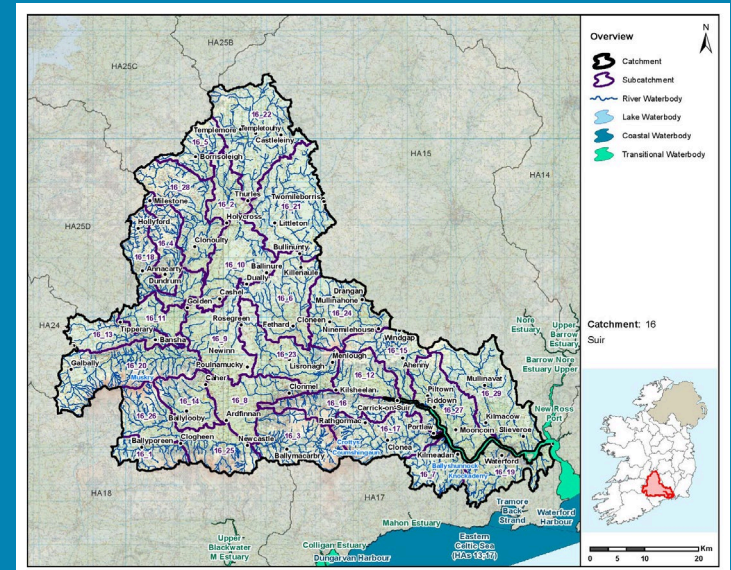

## Previous Catchment Assessments

Previous catchment assessments, which provide additional historic context and information, are archived on [catchments.ie](https://catchments.ie):

- [Cycle 2 Catchment Assessments – published September 2018](#)
- [Cycle 3 Draft Catchment Assessments – published September 2021](#)

## Online Dashboards

Links to online dashboards are provided in this report – these numbers may vary from those in this document as time progresses and the online dashboards are updated based on the latest data and scientific assessments.

Summary Information

The dashboard below provides a breakdown of water quality status for surface and groundwater bodies in the Suir Catchment.

A total of 32% of surface waterbodies were at Good or High Ecological Status in the 2016-2021 monitoring period. Ninety-three percent of groundwater bodies were at Good status.

**Go to EPA Water Maps for WFD Status**

# High Status Objective Waterbodies

Introduction

High status waters are prioritised for protection and action.

There are nine waterbodies with a **High Ecological Status Objective (HSO)** in the Suir Catchment, with seven currently not meeting their environmental objective of High.

Water Quality Summary

Grants for septic tank upgrades may be available in high status objective catchment areas - you can learn more and check your Eircode for eligibility here: <https://www.gov.ie/en/publication/6cc1e-domestic-waste-water-treatment-systems-septic-tanks>

# Water Quality Changes

Below illustrates the changes in ecological status in monitored surface waterbodies over the last five monitoring cycles in the Suir Catchment. Nationally while there have been improvements in some waterbodies, these have been offset by declines elsewhere.

Ecological status trends for monitored surface waterbodies over the last five monitoring cycles in the Suir Catchment. **View online dashboard:** <https://www.catchments.ie/data/#/dashboard/waterquality>

A total of 93 (42%) waterbodies are currently meeting their environmental objective of Good or High Ecological Status.

	Total	Achieving Environmental Objectives (2016-2021)	High Status Environmental Objectives Waterbodies	Achieving High Status Environmental Objectives (2016-2021)

Summary Information

A total of 112 (50%) waterbodies are *At Risk* of not meeting their environmental objective in the Suir Catchment, while 41 (18%) are under *Review* and 69 (31%) are *Not At Risk*.

[Go to EPA Water Map to see WFD Risk for this catchment](#)

WFD Risk for the Suir Catchment based on 2016-2021 data.

**View Online Dashboard:** <https://www.catchments.ie/data/#/dashboard/waterquality>

There is currently one heavily modified water body (HMWB) in the Suir Catchment, *Lower Suir Estuary (Little Island - Cheekpoint)*. It is currently *At Risk*.

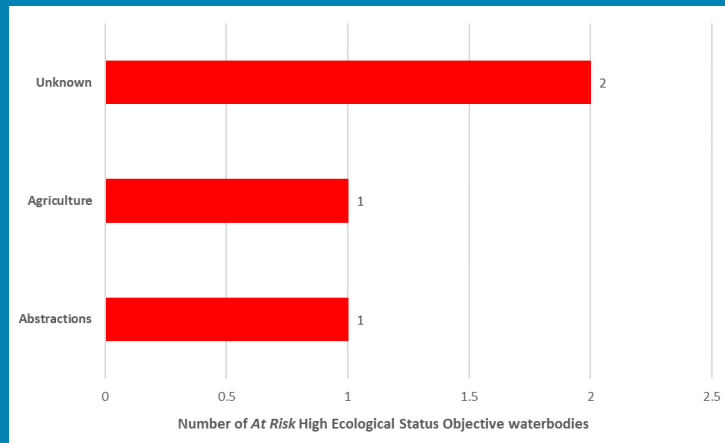

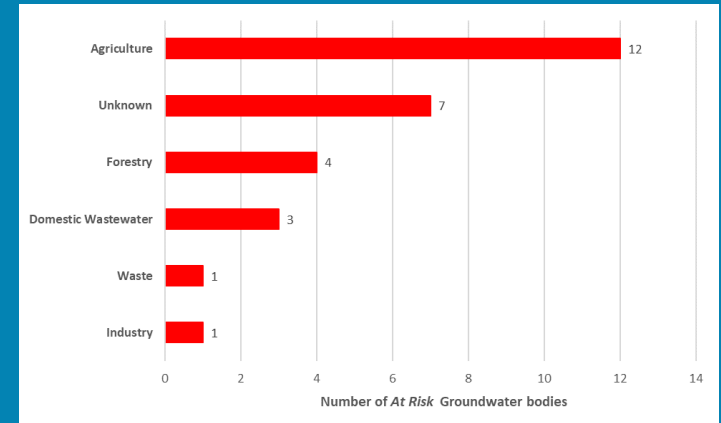

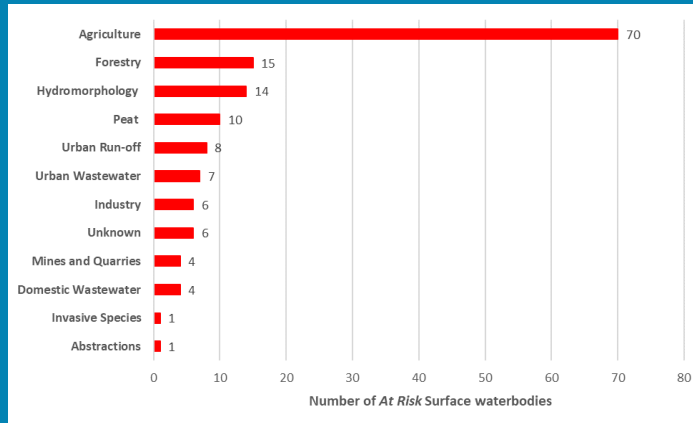

There are no artificial waterbodies in the Suir Catchment.

**The [EPA's characterisation outcome report](#) has more information on WFD Risk**

Click [here](#) for more information on significant pressures

## Significant Pressures driving risk

Significant pressure types impacting the 97 *At Risk* surface waterbodies and 15 groundwater bodies are broken down in the figures below, including significant pressure information for the six *At Risk* High Ecological Status Objective waterbodies.

The issues driven by these pressures are mainly nutrient pollution, organic pollution and altered morphological condition (habitat) impacts for surface water and nutrient pollution, chemical quality diminution for surface water and chemical pollution for groundwaters. For more information, see <https://www.catchments.ie/data/#/dashboard/pressure?k=i351zs>.

**Go to the Summary Information section to get significant pressure and issue data for At Risk waterbodies within the Suir Catchment.**

## Priority Areas for Action

A number of waterbodies have been prioritised through the selection of Areas for Action. There were seven Priority Areas for Action identified for the second river basin management planning cycle in the Suir Catchment. This has increased to a total of 21 Areas for Restoration, four Areas for Protection and two Catchment Projects for the third cycle. ***Go to the summary information section to get Area for Action information for waterbodies within the Suir Catchment.***

*Types of Areas for Action under the third cycle River Basin Management Plan*

- View the current progress of Areas for Action and Summary Reports completed by LAWPRO, on [catchments.ie](https://www.catchments.ie) and the EPA Water Map:
  - <https://www.catchments.ie/data/#/areaforaction>
  - [https://gis.epa.ie/EPAMaps/default?easting=?&northing=?&lid=EPA:WFD\\_AreasForAction](https://gis.epa.ie/EPAMaps/default?easting=?&northing=?&lid=EPA:WFD_AreasForAction)
- LAWPRO have also published detailed desktop studies on Prioritised Areas for Action (PAAs) which are available their website: <https://lawaters.ie/desktop-studies/>
- Information on Areas for Action for the second cycle is available in Cycle 2 Catchment Assessments which have been archived on [catchments.ie](https://www.catchments.ie/download/cycle-2-catchment-assessments-published-september-2018/):
